Summary

Dynamic Frontend Developer specializing in React.js and AI-driven user experiences. Expert in building scalable, interactive web applications with intelligent features, leveraging cutting-edge technologies to enhance engagement. Passionate about creating intuitive, data-driven interfaces that drive innovation and redefine modern user interaction.

Education

University of Engineering and Technology , Taxila
BS in Software Engineering

Sept 2019 – July 2023

- **Coursework:** DSA , Computer Networks , Web Engineering , OOP

Experience

React Developer

DreamHomes Marketing

Lahore, Pakistan

Sep 2023 – Current

- Frontend Developer working with React.js on UI design and development.
- Focused on integrating forms and building responsive interfaces for real estate websites.
- Committed to delivering smooth user experiences and meeting client needs.

Projects

NexApply Job Search Platform

- Designed and developed NexApply, a job search AI Driven platform streamlining the application process with tailored recommendations.
- Technologies used: React.js and Tailwind CSS for building a responsive, user-friendly interface.
- Key contributions: Integrated APIs to enable dynamic job search functionality and personalized recommendations.
- Website Link : <https://nexapply.com/>

AI-Powered News Analysis Platform (Factual Inquirer)

- Developed Factual Inquirer, an AI-powered platform that analyzes news articles for censorship, credibility, and societal value.
- Technologies used: React.js and Tailwind CSS to build a responsive and interactive user interface.
- Key contributions: Integrated advanced AI models and APIs to provide users with tools for assessing news transparency, trustworthiness, and relevance.
- Website Link : <https://factualinquirer.com/>

Tender Dashboard Web Application

- Developed a tender management portal with features to upload and organize tender documents in editable folders, ensuring clear structure and visibility (e.g., project-level document counts).
- Implemented AI-driven modules, including text modification with multiple options (Magic Wand), reusing text from a vector database, and generating critical questions for enhanced decision-making.
- Integrated user-friendly draft management, allowing users to paste, edit, save drafts, modify titles, and track uploaded documents efficiently.
- Built a dynamic chat function to assist users in searching for information, with seamless navigation back to the previous screen upon closing the chat.
- Delivered a clean, bug-free interface, performing CRUD operations and meeting all client requirements on

time, including MVP and advanced modules.

Personalized Video Delivery Platform – SintMagie

In Progress

- Designed and developed a platform tailored for the Sinterklaas event, enabling users to purchase and receive personalized pre-recorded videos featuring realistic Dutch-speaking characters, Sinterklaas and Zwarte Piet, with options to customize the video message and voice.
- Integrated a multi-step form for seamless order collection, where users provide personal details, additional information, custom messages, and photos to tailor the videos. Included OTP verification and secure payments through the Mollie Payment API
- Built a custom user authentication system with email-based password recovery and WhatsApp-based verification, ensuring a smooth and secure user experience.
- Implemented advanced scheduling functionality to automatically deliver personalized videos to WhatsApp or make them available for download on scheduled dates after verification.
- Developed a secure admin panel with authentication, restricting access to features like user management, video purchases, payment tracking, feedback collection, and newsletter management, ensuring efficient event operations.

DreamHomes Official Website

- Designed and developed a visually appealing and user-friendly real estate platform, DreamHomes, providing property listings and market insights tailored for users in Pakistan.
- Utilized React.js and Tailwind CSS to create a responsive, aesthetically pleasing interface with smooth navigation and an enhanced user experience.
- Integrated advanced UI elements to showcase property details, visual data, and forms, enabling seamless property search and inquiries.
- Implemented key features, including modules for form integration, detailed property listings, and user authentication to improve platform functionality.
- Collaborated with cross-functional teams to ensure cohesive development and successful deployment of a high-quality platform.
